

Affiliar Pro

Our top tier. Unlimited affiliates and brands, headroom to two million monthly active players, and every platform feature switched on. Every line below was verified against the product code — what you can promise and what you can't are marked separately.

PRO · MONTHLY	PLUS L2 · MONTHLY	DIFFERENCE	PRO · ANNUAL
\$1,430	\$935	+\$495	\$17,160

Read this first: don't promise white-label

Our pricing page lists “**White-label / custom branding**” under Pro. That feature **does not exist** in the product. It appears as a flag in the plan table, but no code reads it: brand and operator records carry no logo, colour or custom-domain fields, and the affiliate portal has no theming path.

In practice: if a prospect asks whether they can run the portal under their own brand, the answer today is **no**. Check with product before committing to anything here. The pricing page needs correcting too.

POSITIONING

How different is Pro from Plus L2?

Less than you'd expect. The whole \$495 gap buys *capacity* — the feature set is identical across the two tiers. Refer-a-Friend, Crew, anti-abuse, API access and advanced reporting are all switched on in Plus L2 as well.

ITEM	PLUS L2 · \$935	PRO · \$1,430
Affiliates	500	Unlimited
Brands	50	Unlimited
Monthly active players	400,000	2,000,000
White-label	—	Not in product
Every other feature	Included	Included

So the upgrade case is never a feature — it's **growth**. An operator pushing past 500 affiliates or 400,000 active players moves to Pro. One who isn't won't, and saying so earns more trust than the extra \$495 is worth.

SCOPE

What Pro includes

Every plan flag is enforced server-side. These are working entitlement gates, not marketing claims.

Attribution & Commission	
INCLUDED	Five commission models RevShare, CPA, hybrid, tiered RevShare and flat fee. Lower tiers get a reduced set.
INCLUDED	Two-tier affiliates (sub-affiliates) Revenue share on affiliates an affiliate brings in, with its own payout flow.
INCLUDED	Campaign tracking and smartlinks Breakdown by campaign, sub-identifier (sub_id) and click, with tracked redirect links.
INCLUDED	Custom fees and a KYC threshold Per-brand NGR and deposit percentages; CPA that only counts once a player clears a set KYC level.
Player Programmes	
INCLUDED	Refer-a-Friend Player-to-player referrals, kept separate from the affiliate programme — its own qualification rules, fraud gates and reward ledger.
INCLUDED	Crew (tiered referrals) Reward levels that climb as a player's crew grows, with an optional monthly share of their friends' NGR.
INCLUDED	Player bonuses, creative library, leaderboard Operator-defined bonuses distributed through affiliates; a banner and creative store; player rankings.
Integration	

INCLUDED

Two integration modes

Raw events (one per bet or win, we do the aggregation) or hourly pre-aggregated activity. The customer picks.

INCLUDED

Kafka or REST transport

Same event schema either way, so a customer can start on REST and move to Kafka without a rewrite.

INCLUDED

API access and reward webhooks

Signed per-brand callbacks with automatic retries and a test send from the panel. Leave it off and the same data is available to pull.

INCLUDED

Bulk CSV import

For affiliate lists and provider fee rates. The most-asked question in any migration conversation.

PAYOUTS

INCLUDED

Stablecoin commission payouts

USDT on TRC20, ERC20 and BEP20 · USDC on ERC20 and BEP20. Affiliates pick their network and wallet in their own portal.

INCLUDED

Minimum payout threshold

Affiliates below the threshold stay off the pending-payouts screen. Nothing is forfeited — it accrues until they clear it.

REPORTING & INTEGRITY

INCLUDED

Advanced analytics

Cohort analysis and affiliate quality scoring. Lower tiers get the standard reports only.

INCLUDED

Anti-abuse scanning

Shared-fingerprint detection; flagged players are listed with the reason and the affiliate who sent them.

INCLUDED

Multi-user teams

Several users and roles on the operator side. Only we can remove an account owner.

INCLUDED

Weekly and monthly digest emails

Sent per operator and per affiliate, at whatever cadence each recipient chooses.

LIMITS & EXCEPTIONS

What to watch for

Things worth settling with the customer before a contract, not after.

MISSING

White-label / custom branding

On the pricing page, absent from the product. Do not promise it.

SOFT

The 2,000,000 monthly active player limit

Not a hard ceiling. Usage triggers graduated warning emails from 60% onward, and nothing is cut off when it's exceeded. Position it as fair use; anything beyond is an enterprise conversation.

SERVICE

Priority co-managed sourcing and a dedicated account manager

A people commitment, not a software feature — there's nothing in the system behind it, and the “priority” difference between Plus L2 and Pro isn't encoded anywhere either. Don't commit without confirming we have the capacity.

PROCESS

Late payment terms

Reminders at 7, 5, 3 and 1 days before the due date and on the day, then at 1, 3, 5 and 7 days after. Daily interest accrues while overdue, and at day 10 the panel is suspended — with no data recorded while it is. Say this out loud during contracting.

IN THE FIELD

Questions you'll get

“Why Pro instead of Plus L2?”

The only honest answer is capacity. If you'll pass 500 affiliates, 50 brands or 400,000 active players, take Pro. If you won't, Plus L2 gives you the same features — and saying so wins more deals than it loses.

“Can we run the portal under our own brand?”

Not today. Take it to product as a roadmap question and don't offer a date.

“Can we migrate our existing affiliates?”

Yes — bulk CSV import is available on Pro and Plus. Provider fee rates come across the same way.

“How long does integration take?”

Start on REST, move to Kafka for production volume; the event schema is identical, so the switch isn't a rewrite. The customer chooses raw or pre-aggregated events at sign-up.

“How do affiliates get paid?”

In stablecoin: USDT on TRC20, ERC20 or BEP20, or USDC on ERC20 or BEP20. Affiliates set their own network and wallet address in their portal.

Sources: plan definitions in `utils/planLimits.js`, entitlement gates in `middlewares/planGuard.js` — all 13 gates confirmed mounted on live routes.

Prices are monthly and in USD. Prepared 24 August 2026.
